PRACTICAL GUIDE / 01 / SET THE BRIEF

A small, useful assistant trial

Choose one ordinary task you can judge. Use invented details for a first trial, keep the scope small and save the result you actually reviewed.

1. What do you want help with?

Example: prepare a short question for a fictional workshop organizer. Keep account credentials and sensitive details out of the trial.

2. What would a useful finished result look like?

3. Which confirmed facts and constraints should shape it?

Separate a fact you checked from a preference, temporary exception or assumption.

4. Where should the work stop?

Specify research, draft or action. For a first trial: do not send, book, buy or change anything.

PRACTICAL GUIDE / 02 / INSPECT THE RESULT

Check the claim, then the source.

Record the few claims that could change your next decision. A source link needs to support the exact date, place, item or account involved.

Important claim	Source and context match	Status / next check

Use: supported, contradicted or unconfirmed. Unconfirmed is a useful result; do not turn a missing fact into a confident guess.

If an action was involved, what proves what happened?

A prepared draft, an attempted request and a confirmed result are different stages. Inspect the destination or receipt before repeating an uncertain action.

Did the help earn its place?

Compare the result with your original brief. These are reflection questions, not a validated score or a ranking of products.

- [ ] The result respects my confirmed facts and constraints.
- [ ] It identifies important assumptions and unresolved details.
- [ ] I can inspect and correct the work without starting again.
- [ ] It stayed within the boundary I chose.

What work remained for you, including setup and review?

What correction would improve the next attempt?

Next step: keep this scope, revise it or choose another kind of help?

Published by the Twin team. Twin is developing a personal assistant; this worksheet is educational guidance, not a live customer trial or independent product endorsement.
